Index

Note: Page numbers followed by "*f*" and "*t*" refer to figures and tables, respectively.

A

ABox, 11
Actor concept, 13–14
Advisory systems, 118–120
Agent concept, 13
Amazon Alexa, 7
Amazon Echo, 9–10
Ant Colony Optimization (ACO)–based classifier algorithm, 110
Archetype Management System, 47
Artificial Neural Network (ANN), 179–180
Asymmetric key cryptography/public-key cryptography, 255–256

B

Bag of words (BOW), 236
Batch processing, 155
Bayesian network for COVID19 likelihood diagnosis, 88*f*
Behavioral monitoring, 181–182
Big data, 155

C

Catalog Of Somatic Mutations In Cancer (COSMIC) Mutation dataset, 245
Chronic Obstructive Pulmonary Disease (COPD), 168
Cipher text, 262
Clinical coding systems, 41–42, 43*f*
Clinical decision support systems (CDSSs), 69–70, 81–82, 132–134
  semantic knowledge graph for, 82–83
Clinical Document Architecture (CDA), 100–101
Clinical Natural Language Processing (Clinical NLP), 233–242
  deep learning techniques in, 240–242
    convolution neural network (CNN), 240–241, 241*f*
    recurrent neural network (RNN), 241–242, 241*f*
  genetic mutation classification using deep learning and (case study), 245–249
  graphical techniques in, 238–239
    hyper link induced topic search (HITS), 238–239
    TextRank algorithm, 238
  linguistic techniques in, 237–238
    dependency graph, 237–238
    part of speech (POS) tagging, 237
    tokenization, 237
  machine learning techniques in, 239–240
    support vector machine (SVM), 239–240, 239*f*
    Word2Vec, 240
  and semantic web, 242–245
    framework for classification of genetic mutations using ontologies, 243–245
    ontology creation from clinical documents, 242–243
  statistical techniques in, 236–237
    bag of words (BOW), 236
    rapid automatically keyword extraction (RAKE), 236–237
    term frequency-inverse document frequency (TF-IDF), 236
Clinical terminology system and classification system, 43*t*
Composite Capability/Preference Profiles (CC/PP) technique, 212
Conceptual interoperability, 157
Conditional random field (CRF), 168
Connected electronic health record, 95
  analysis performance of, 111–112
  architecture description, 105–107
  background, 100–102
    electronic health record-related standards and terminologies, 100–101
    semantic interoperability, 101–102
  data processing module, 107–110
    data analysis based on data aggregation process, 108–110
    data transformation, 107–108
    preprocessing data, 107
  electronic health records and EHR systems, 102–104
  future works, 113–114
  implementation, 110
  response time of, 112–113
  smart health unit, 99–100
ConversationItem, 14
Convology, 7–22, 13*f*
  in action, 17–19

Convology (*Continued*)
Actor concept, 13–14
availability and reusability, 16
background, 9–10
construction of, 10–12
conceptualization, 12
integration, 12
knowledge acquisition, 11
specification, 11
ConversationItem, 14
Dialog concept, 13
Event concept, 15
future work, 20
resource sustainability and maintenance, 19–20
Status concept, 15–16
Convolution neural network (CNN), 179–180, 240–241, 241*f*
COVID19 epidemic, 88–90
COVID19 likelihood diagnosis
Bayesian network for, 88*f*
MTheory for, 91*f*
C-rater, 223
Cryptographic algorithms, 253
Cryptography, 253–254

D
Data processing module, 107–110
data analysis based on data aggregation process, 108–110
data transformation, 107–108
preprocessing data, 107
DATAtourisme, 212, 215
Data warehouse system, 130
Decision support system (DSS), 117–119, 177–182, 178*f*, 195
IoT-enabled, 178–179
data acquisition, 179
data transmission and storage, 179
machine learning and deep learning techniques, application of, 179–182
behavioral monitoring, 181–182
identification of diseases, 180–181
smart electronic health records, 181
ontology's role in, 182–187
issues and challenges, 185–186
technology available, 186–187
quality of service (QoS) and quality of experience (QoE) parameters in, 187–190
Deep Belief Network, 179–180
Deep Neural Network (DNN), 181
Density-based FS (DFS) approach, 110
Dependency graph, 237–238
Description Logic (DL) techniques, 181, 197
DialogAction concept, 14
Dialog concept, 13
DialogFlow platform, 8
DialogStatus, 11, 16
Dice Coefficient, 226
DIFUTURE architecture, 134–135
Digital Imaging and Communications in Medicine (DICOM), 100–101
DILIGENT, 10
Dynamic interoperability, 157

E
Earthquake, 121–122, 125
Electronic Health Record (EHR), 97–98, 100–101, 168, 233–234, 246*f*
Electronic medical record (EMR) system, 130
ELIZA, 9
Emergency Resource Ontology (ERO), 120
Emergency situations, 117–118, 121–122
EventAnswer, 15
Event concept, 15
EventQuestion, 15
Extensible markup language (XML), 256, 259–260
Extraction, transformation, and loading (ETL) tools, 130

F
Faster Region-based CNN (Faster R-CNN), 182
Fast healthcare interoperability resources (FHIR), 31–32, 37, 39–40
FastText embeddings, 169
Feature-based sentiment analysis, 160
First-order logic (FOL), 89
Formal concept analysis (FCA), 48–49
Free word order, 157

G
Gloze approach, 25–26
Google Assistant, 7
Google Home, 9–10
Graph-based Aggregation Model (GAM), 109–110

H
HasRelevantIntent object property, 14, 18
HasTriggerQuestion object property, 14
Healthcare Bigdata Hub, 60–62
Healthcare Cube Integrator (HCI), 129–152
future enhancement of work, 149
HCI conceptual framework and designing framework, 136–140
implementation framework and experimental setup, 140–148

research methods and literature findings of research publications, 131–136
electronic health record availability in India and its privacies challenges, 132
electronic health records databases/system study, 132–133
health care processes and semantic web technologies, 135–136
Indian health policies and information technology, 131–132
research objectives, 136
study of existing health knowledgebases and their infrastructures, 133–134
study of existing solution available for health data integration, 134–135
result analysis, 148
state-of-the-art health care system, 129–131
Healthcare Enterprise (IHE), 100–101
Health Level 7 (HL7), 100–101
HL7 version 2.x, 37–38
HL7 version 3.x, 38–39
Heterogeneity, 155
Hierarchical agglomerative clustering (HAC), 247
Hierarchical Attention Networks (HANs) method, 170
Human phenotype ontology (HPO), 133–134
Hyper link induced topic search (HITS), 238–239
HyperText Markup Language (HTML), 165–166

I

Inflammation, 49
Information extraction in the healthcare sector, 174
Insight analysis module, 109–110
Integrated Care EHR (ICEHR), 102
International Classification of Diseases (ICD)-11, 100–101
Internet of Things (IoT)-enabled decision support system, 178–179
data acquisition, 179
data transmission and storage, 179
Internet of things-based ontologies, 101–102
Issue-Procedure Ontology (IPO), 198–202, 199*f*
Issue-Procedure Ontology for Medicine (IPOM), 198, 202–208, 203*f*

J

JavaScript Object Notation (JSON) format, 39

K

Knowledge-based DSS (KBDSS), 195–196, 198
Knowledge-based systems (KBSs), 69
Knowledge graphs, 77–78
Knowledge modeling, ontology's role in decision support system (DSS) for, 182–187
issues and challenges, 185–186
technology available, 186–187
Knowledge organization system (KOS), 75
Knowledge representation (KR), 69, 74, 157–158

L

Latent Dirichlet Allocation, 167
Latent Semantic Analysis (LSA), 169, 223
Linked Data, 256
Linked Open Data (LOD), 12, 157–158
Logical Observation Identifiers Names and Codes (LOINC), 42–44
Loinc, 100–101
Long Short Term Memory (LSTM), 168

M

Machine learning, 157, 160–161
Machine learning and deep learning techniques, application of, 179–182
behavioral monitoring, 181–182
identification of diseases, 180–181
smart electronic health records, 181
Meaning-aware information search and retrieval framework for healthcare, 165–176
future research dimensions, 174
medical catalog terminology extractor, 171
medical ontology, 171
from ontologically annotated medical catalog database, 172
meaning-aware search results recommendations, 172
semantic query experience, 172
related work, 167–170
semantic healthcare information discovery, 173–174
semantic reasoner, 172
semantic search and information retrieval in healthcare, 170
semantic similarity computation, 172–173
Meaning-aware search result recommendation in healthcare, 172, 175
Medical catalog terminology extractor, 171
Medical Devices (MD), 97–99, 102
Medical institutions in Korea, 55–68
classification of, 60*t*
hierarchical structure, 62*f*
knowledge base, formal definition of, 56
knowledge graph of, 60–65, 66*f*
data collection, 60–62
graph transformation, 64–65
model of administrative district, 62–63
model of medical institutions, 63
public data in Korea, 56–57
Medical ontology, 171

Medical Service Act, 57–58, 63
Medicine, issue-procedure ontology for, 203–208
Metadata, 256
Meteorological disaster ontology (MDO), 119–120
METHONTOLOGY, 10
MFrags, 89
Mixed script (code mixed) sentences, 157
MTheory, 89
  for COVID19 likelihood diagnosis, 91*f*
Multientity Bayesian networks (MEBN), 87, 89–91
  and ontology web language, 91–92
  and Probabilistic Context-Free Grammar (PCFG), 92–93

N

Natural language, 221–222
Natural language processing (NLP) system, 157, 167–168, 233–234
Natural language understanding (NLU) algorithms, 7
NeOn, 10
N-gram, 237

O

Ocean Template Designer, 245
Ontology, 4, 175
Ontology-based decision-making, 195–210
  issue-procedure ontology, 198–202
    for medicine, 203–208
Ontology-based intelligent decision support systems, 177–194
  application of machine learning and deep learning techniques, 179–182
    behavioral monitoring, 181–182
    identification of diseases, 180–181
    smart electronic health records, 181
  IoT-enabled decision support system, 178–179
    data acquisition, 179
    data transmission and storage, 179
  QoS and QoE parameters in decision support systems for healthcare, 187–190
  role of ontology in DSS for knowledge modeling, 182–187
    issues and challenges, 185–186
    technology available, 186–187
Ontology-based knowledge base method, 197*f*
Ontology-based semantic similarity, profile identification using, 211–220
  profile creation, 216–218
  semantic matching, 214–216
    build paths, 214
    semantic similarity, 215
    weight computing of the concept, 215–216
  weight allocation for keyword, 213–214
Ontology-supported rule-based reasoning for emergency management, 117–128
  future work, 127
  inference of knowledge, 122–127
    sample scenarios, 125–127
    system in action, 123–125
  literature review, 119–120
  system framework, 120–122
    construction of ontology, 120–122
Ontology Web Language (OWL) ontology, 24–25, 27–28, 124
OpenEHR, 100–101
OpenRefine, 64–65, 64*f*
Otitis media, 41–42, 42*f*

P

Part of speech (POS) tagging, 222–223, 237
Physical interoperability, 32
Plain text, 262
Pragmatic interoperability, 157
Privacy and semantic web, 264–265
Probabilistic Context-Free Grammar (PCFG)
  multientity Bayesian networks (MEBN) and, 92–93
Probabilistic ontologies, 92
Probabilistic Web Ontology Language (PR-OWL), 87, 92
Public Data Portal, 57, 60–62
Public Key Cryptography (PKC), 255
Publishing and consuming data on the web, 3
PuffBot, 17–19

Q

Quality of service (QoS) and quality of experience (QoE) parameters in decision support systems, 187–190

R

Rapid automatically keyword extraction (RAKE), 236–237
Recurrent neural network (RNN), 168, 179–180, 241–242, 241*f*
Reference information model (RIM), 38
Relational database management system (RDBMS) model, 33
Representational State Transfer (REST) architecture, 39, 39*t*, 195
Resource description framework (RDF), 2, 24–25, 69–86, 118–119, 134–135, 165–166, 206, 207*f*, 256
  clinical decision support systems (CDSS), 81–82
    semantic knowledge graph for, 82–83
  future possibilities, 83–84
  graphs, 33–34, 34*f*

RDF Query Language, 36
knowledge-based systems, 71–72
knowledge graphs, 77–78
knowledge organization system (KOS), 75
knowledge representation
in knowledge-based system, 72–73
resource description framework for, 73–75
RDF in attributes (RDFa), 26
as a semantic data model, 24–25
semantic knowledge graph (SKG), 78–81
advantages, 83
simple knowledge organization system (SKOS), 75–77
and resource description framework, 76–77
Resource description framework schema (RDFS), 32, 34–35, 75–76
Rule-based engine, 184
Rule-based POS tagging, 237

S

Sarcasm detection, 157
Semantic annotation, 159–160
Semantic attackers, 264
Semantic data models, 23–30
conceptual evaluation, 27–28
comparison study, 27
generalized architecture, 27–28
findings, 28–29
related work, 25–26
Resource Description Framework (RDF) as, 24–25
Semantic healthcare information discovery, 173–174
Semantic indexing module, 184–185
Semantic Intelligence, 2–4
publishing and consuming data on the web, 3
technologies applied within enterprises, 3–4
Semantic Intelligence technologies (SITs), 1–2
Semantic interoperability, 31–54, 101–102
clinical coding systems, 41–42, 43*f*
clinical terminology systems and clinical classification systems, difference between, 42–44
healthcare interoperability, 32
and semantic web technologies, 32–37, 44–49
applications of, 36–37
resource data framework, 33
Resource Description Framework (RDF) graphs, 33–34, 34*f*
SPARQL Protocol, 36, 45*f*
vocabularies, RDFS and OWL, 34–35
semantic web technology, challenges with the adoption of
at the semantic interoperability level, 50
at the syntactic interoperability level, 50–51
syntactic interoperability, 37–40
fast healthcare interoperable resource, 39–40
Health level 7 version 2.x, 37–38
Health level 7 version 3.x, 38–39
syntactic interoperability and semantic web technology, 46–47
Semantic knowledge discovery in healthcare, 174
Semantic knowledge graph (SKG), 69–70, 78–81
Semantic query experience in healthcare, 172, 175
Semantic reasoner, 172
Semantic search, 174
and information retrieval in healthcare, 170
Semantic similarity, 221–232
algorithm, 227
between a pair of sentences, 226
between words, 226–227
computation, 172–173, 212, 215
data set, 227–228
literature survey, 222–223
results, 228–229
word similarity, 225–226
Semantic web, 1, 233–234, 253–268
clinical natural language processing and, 242–245
framework for classification of genetic mutations using ontologies, 243–245
ontology creation from clinical documents, 242–243
different attacks on, 262–263
importance of transport layer security on semantic web, 262–263
future security protocols for, 265–266
privacy and semantic web, 264–265
related work, 258–259
security and cryptography, 253–256
asymmetric key cryptography/public-key cryptography, 255–256
symmetric key cryptography/secret key cryptography, 255
security standards for, 259–262
extensible markup language, securing, 259–260
information interoperability in a secured way, 261–262
resource description framework, securing, 260
semantic attackers, 264
and uncertainty, 90–91
W3C social web standards, drawbacks of existing privacy and security protocols in, 263–264
Semantic web rule language (SWRL), 119–120
Sentiment analysis, 156*f*, 160
Similarity matrix calculation, 226–227
Simple knowledge organization system (SKOS), 70, 75–77, 200
and resource description framework, 76–77

Simple Object Access Protocol (SOAP) architecture, 39, 39*t*
Smart electronic health records, 181
Smart Health Unit (SHU), 99
Smart mental healthcare systems, 153–164
  architecture, 159–161
    machine learning, 160–161
    semantic annotation, 159–160
    sentiment analysis, 156*f*, 160
  benefits, 158–159
    actionable knowledge, 158–159
    contextualization, 158
    early intervention or detection, 159
    invasive and continuous monitoring, 159
    personalization, 158
    privacy and cost of treatment, 159
  challenges, 155–158
    big data, 155
    heterogeneity, 155–157
    invasive and continuous monitoring, 158
    knowledge representation, 157–158
    natural language processing, 157
  classification of mental healthcare, 154–155
SMSD (Semantic Medical Sensor Data ontology), 102
Social data, 154–155
SPARQL language, 2, 26
SPARQL Protocol, 36, 45–46, 45*f*
Standards developing organizations (SDOs), 100–101
Stanford Natural Language Processing, 214
Statistical Data and Metadata Exchange Health Domain (SDMX-HD), 100–101
Status concept, 15–16
StatusItem concept, 14, 18
Streaming processing, 155
Structured query language (SQL), 36
Substitutable medical applications and reusable technologies (SMART), 46
Support vector machine (SVM), 168, 239–240, 239*f*
Surmising, 265
Symmetric key cryptography/secret key cryptography, 255
Syntactic interoperability, 32, 37–40
  fast healthcare interoperable resource, 39–40
  Health level 7 version 2.x, 37–38
  Health level 7 version 3.x, 38–39
  and semantic web technology, 46–47
Syntactico-semantic reasoning, 93
Systematized NOmenclature of MEDicine-Clinical Terms (SNOMED-CT), 31–32, 42–44, 48–50

T

TBox, 11
Term frequency-inverse document frequency (TF-IDF), 236
Terminology and Data Elements Repositories for Healthcare Interoperability (TeRSan), 49
TextRank algorithm, 238
Tokenization, 237
Transport Layer Security (TLS), 258–259, 262–263

U

UIMA Ruta, 168
Unified Medical Lexicon System (UMLS), 100–101
Uniform resource identifier (URI), 63, 73–74
Universal resource identifier (URI), 24, 33
User concept, 13–14
UserEvent concept, 11, 15–16
UserStatus concept, 11, 15–16

W

Wearable devices, 136–137, 139–140
Web Ontology Language (OWL), 34–35, 75–76, 100–101, 165–166, 196
WebSub, 264
Weight of the keyword, 214
Word2Vec, 240
Word matching, 23–24
WordNet, 214, 224–228
World Wide Web Consortium (W3C), 256

X

XML (extensible mark-up language), 24–26
XQuery language, 26
XSPARQL, 26
