List of contributors ix

Preface xi

1. Semantic intelligence - An overview

Sarika Jain

1.1 Overview 1

Section I

Representation

2. Convology: an ontology for conversational agents in digital health

Mauro Dragoni, Giuseppe Rizzo and Matteo A. Senese

2.1 Introduction 7
2.2 Background 9
2.3 The construction of convology 10
2.4 Inside convology 12
2.5 Availability and reusability 16
2.6 Convology in action 17
2.7 Resource sustainability and maintenance 19
2.8 Conclusions and future work 20
References 21

3. Conversion between semantic data models: the story so far, and the road ahead

Shripriya Dubey, Archana Patel and Sarika Jain

3.1 Introduction 23
3.2 Resource Description Framework as a semantic
data model 24
3.3 Related work 25
3.4 Conceptual evaluation 27
3.5 Findings 28
3.6 Concluding remarks 29
References 30

4. Semantic interoperability: the future of healthcare

Rashmi Burse, Michela Bertolotto, Dymphna O'Sullivan
and Gavin McArdle

4.1 Introduction 31
4.2 Semantic web technologies 32
4.3 Syntactic interoperability 37
4.4 Semantic interoperability 40
4.5 Contribution of semantic web
technology to aid healthcare
interoperability 46
4.6 Discussion and future work 49
4.7 Conclusion 51
References 51

5. A knowledge graph of medical institutions in Korea

Haklae Kim

5.1 Introduction 55
5.2 Related work 56
5.3 Medical institutions in Korea 57
5.4 Knowledge graph of medical institutions 60
5.5 Conclusion 66
References 67

6. Resource description framework based semantic knowledge graph for clinical decision support systems

Ravi Lourdasamy and Xavierlal J. Mattam

6.1 Introduction 69
6.2 Knowledge representation using RDF 71
6.3 Simple knowledge organization system 75
6.4 Semantic knowledge graph 77
6.5 Semantic knowledge graph for clinical
decision support systems 81
6.6 Discussion and future possibilities 83
6.7 Conclusion 84
References 84

7. Probabilistic, syntactic, and semantic reasoning using MEBN, OWL, and PCFG in healthcare

Shrinivasan Patnaikuni and Sachin R. Gengaje

- 7.1 Introduction 87
- 7.2 Multientity Bayesian networks 89
- 7.3 Semantic web and uncertainty 90
- 7.4 MEBN and ontology web language 91
- 7.5 MEBN and probabilistic context-free grammar 92
- 7.6 Summary 93
- References 93

Section II

Reasoning

8. The connected electronic health record: a semantic-enabled, flexible, and unified electronic health record

Salma Sassi and Richard Chbeir

- 8.1 Introduction 97
- 8.2 Motivating scenario: smart health unit 99
- 8.3 Literature review 100
- 8.4 Our connected electronic health record system approach 105
- 8.5 Implementation 110
- 8.6 Experimental results 111
- 8.7 Conclusion and future works 113
- References 114

9. Ontology-supported rule-based reasoning for emergency management

Sarika Jain, Sonia Mehla and Jan Wagner

- 9.1 Introduction 117
- 9.2 Literature review 119
- 9.3 System framework 120
- 9.4 Inference of knowledge 122
- 9.5 Conclusion and future work 127
- References 127

10. Health care cube integrator for health care databases

Shivani A Trivedi, Monika Patel and Sikandar Patel

- 10.1 Introduction: state-of-the-art health care system 129
- 10.2 Research methods and literature findings of research publications 131
- 10.3 HCI conceptual framework and designing framework 136
- 10.4 Implementation framework and experimental setup 140
- 10.5 Result analysis, conclusion, and future enhancement of work 148
- Acknowledgment 149
- References 149

11. Smart mental healthcare systems

Sumit Dalal and Sarika Jain

- 11.1 Introduction 153
- 11.2 Classification of mental healthcare 154
- 11.3 Challenges of a healthcare environment 155
- 11.4 Benefits of smart mental healthcare 158
- 11.5 Architecture 159
- 11.6 Conclusion 161
- References 162

12. A meaning-aware information search and retrieval framework for healthcare

V.S. Anoop, Nikhil V. Chandran and S. Asharaf

- 12.1 Introduction 165
- 12.2 Related work 167
- 12.3 Semantic search and information retrieval in healthcare 170
- 12.4 A framework for meaning-aware healthcare information extraction from unstructured text data 170
- 12.5 Future research dimensions 174
- 12.6 Conclusion 174
- Key terms and definitions 174
- References 175

13. Ontology-based intelligent decision support systems: A systematic approach

Ramesh Saha, Sayani Sen, Jayita Saha, Asmita Nandy, Suparna Biswas and Chandreyee Chowdhury

- 13.1 Introduction 177
- 13.2 Enabling technologies to implement decision support system 178
- 13.3 Role of ontology in DSS for knowledge modeling 182
- 13.4 QoS and QoE parameters in decision support systems for healthcare 187
- 13.5 Conclusion 190
- References 191

14. Ontology-based decision-making

Mark Douglas de Azevedo Jacyntho and Matheus D. Morais

- 14.1 Introduction 195
- 14.2 Issue-Procedure Ontology 198
- 14.3 Issue-Procedure Ontology for Medicine 203
- 14.4 Conclusion 208
- References 208

15. A new method for profile identification using ontology-based semantic similarity

Abdelhadi Daoui, Noredine Gherabi and Abderrahim Marzouk

- 15.1 Introduction 211
- 15.2 Proposed method 212
- 15.3 Conclusion 218
- References 218

16. Semantic similarity—based descriptive answer evaluation

Mohammad Shaharyar Shaukat, Mohammed Tanzeem, Tameem Ahmad and Nesar Ahmad

- 16.1 Introduction 221
- 16.2 Literature survey 222
- 16.3 Proposed system 223
- 16.4 Algorithm 227
- 16.5 Data set 227
- 16.6 Results 228
- 16.7 Conclusion and discussion 229
- Acknowledgments 230
- References 230

17. Classification of genetic mutations using ontologies from clinical documents and deep learning

Punam Bedi, Shivani, Neha Gupta, Priti Jagwani and Veenu Bhasin

- 17.1 Introduction 233
- 17.2 Clinical Natural Language Processing 234
- 17.3 Clinical Natural Language Processing (Clinical NLP) techniques 235
- 17.4 Clinical Natural Language Processing and Semantic Web 242
- 17.5 Case study: Classification of Genetic Mutation using Deep Learning and Clinical Natural Language Processing 245
- 17.6 Conclusion 249
- References 249

Section III

Security

18. Security issues for the Semantic Web

Prashant Pranav, Sandip Dutta and Soubhik Chakraborty

- 18.1 Introduction 253
- 18.2 Related work 258
- 18.3 Security standards for the Semantic Web 259
- 18.4 Different attacks on the Semantic Web 262
- 18.5 Drawbacks of the existing privacy and security protocols in W3C social web standards 263
- 18.6 Semantic attackers 264
- 18.7 Privacy and Semantic Web 264
- 18.8 Directions for future security protocols for the Semantic Web 265
- 18.9 Conclusion 266
- References 266
